DETAILED ACTION

1. Applicant's arguments filed 05 Jan 05 have been fully considered but they are not persuasive.

Applicant's Arguments

a) Applicant states that Cottle does not teach or suggest the step of storing frame data, which corresponds to a frame in a display buffer with plural registers. Applicant states that the frame data of the present invention comprises all display information for showing on the screen, where each memory cell, such as bit or byte in the display buffer 20 corresponds to a pixel of the display screen 60. Applicant also states that all memory cells of the display buffer store the frame data for showing the entire displayed image of the screen, where the frame data at least comprises OSD data, background color and motion video. Applicant notes that Cottle recites that the display area that does not contain any OSD data, such as background color or motion video is not included in the frame memory (see column 42, lines 37-39 and Fig 18E).

Examiner's Response

b) The examiner agrees that Cottle recites that the display area that does not contain any OSD data such as background color or motion video is not included in the frame memory, thus Cottle does store in frame memory display area that contain any OSD data, thus reading on the pending claims.

Application/Control Number: 10/087,774

Art Unit: 2614

The examiner also notes that although the applicant describes further aspects of the invention, these limitations or recitations as such are not included in any of the pending claims and thus will not be addressed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2a Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Cottle et al US 6,263,3961.

As is broadly illustrated in figure 18e, Cottle et al described an OSD control system which comprises:

- a) A display memory comprised of a frame memory (312);
- b) A memory (240); and
- c) Circuitry for copying OSD data into the display memory (312) from the memory (240)

In considering claim 2,

Note element 272 of figure 18B.

In considering claim 3,

Note element 1040 of figure 18B.

Application/Control Number: 10/087,774 Page 4

Art Unit: 2614

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cottle et al US 6,263,3961.

In considering claims 4-5,

The claims differ from the showing of Cottle et al. only in the recitation of the nbit block transfer flag".

It would at least have been obvious to one of ordinary skill in the art to have provided the system disclosed by Cottle et al. with a "flag" via the bit block transfer mode. tracking transfers of the OSD via the bit block transfer flag.

In considering claims 6-7,

Art Unit: 2614

The claims differ from the showing of Cottle et al. only in the recitation of the "overlay flag".

It would at least have been obvious to one of ordinary skill in the art to have provided the system disclosed by Cottle et al. with "flag" for tracking the window location configuration of the frame memory into which the OSD is transferred; i.e. such flags would be cleared wherever the window configuration was changed.

Conclusion

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Yenke whose telephone number is (571)272-7359. The examiner work schedule is Monday-Thursday, 0730-1830 hrs.

Art Unit: 2614

If attempts to reach the examiner by telephone are unsuccessful, the examiner's Supervisor, John W. Miller, can be reached at (571)272-7352.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(571)-273-8300

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is

(703)305-HELP.

General information about patents, trademarks, products and services offered by the United States Patent and Trademark Office (USPTO), and other related information is available by contacting the USPTO's General Information Services Division at:

800-PTO-9199 or 703-308-HELP

(FAX) 703-305-7786

(TDD) 703-305-7785

An automated message system is available 7 days a week, 24 hours a day providing informational responses to frequently asked questions and the ability to order certain documents. Customer service representatives are available to answer questions, send materials or connect customers with other offices of the USPTO from 8:30 a.m. - 8:00p.m. EST/EDT, Monday-Friday excluding federal holidays.

For other technical patent information needs, the Patent Assistance Center can be reached through customer service representatives at the above numbers, Monday through Friday (except federal holidays) from 8:30 a.m. to 5:00 p.m. EST/EDT.

Page 7

The Patent Electronic Business Center (EBC) allows USPTO customers to retrieve data, check the status of pending actions, and submit information and applications. The tools currently available in the Patent EBC are Patent Application Information Retrieval (PAIR) and the Electronic Filing System (EFS).

PAIR (http://pair.uspto.gov) provides customers direct secure access to their own patent

application status information, as well as to general patent information publicly available. EFS allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
